

AMENDMENTS TO THE CLAIMS

Please add or amend the claims to read as follows, and cancel without prejudice or disclaimer to resubmission in a divisional or continuation application claims indicated as cancelled:

1. (Withdrawn) An in-vivo device comprising:
 - a sensor; and
 - a MEMS switch.
2. (Withdrawn) The in-vivo device according to claim 1 wherein the sensor is an imager.
3. (Withdrawn) The in-vivo device according to claim 1, wherein the in-vivo device is a swallowable capsule.
4. (Withdrawn) The in-vivo device according to claim 1, wherein the MEMS switch is operable to alter the mode of the device.
5. (Withdrawn) The in-vivo device according to claim 1, wherein to alter the mode of the device is in response to a magnetic field.
6. (Withdrawn) The in-vivo device of claim 1 comprising a transmitter.
7. (Withdrawn) The in-vivo device of claim 1, wherein the MEMS switch is a normally closed MEMS switch.
8. (Withdrawn) The in-vivo device of claim 1, wherein the MEMS switch comprises:
 - a first ferromagnetic conductive terminal;
 - a flexible ferromagnetic conductive terminal; and
 - a non-magnetic conductive terminal; wherein the first ferromagnetic conductive terminal and the non-magnetic conductive terminal are electrically isolated.
9. (Withdrawn) An in-vivo device comprising:
 - a sensor; and
 - a switch, the switch comprising:
 - a first ferromagnetic conductive terminal;
 - a flexible ferromagnetic conductive terminal; and

a non-magnetic conductive terminal; wherein the first ferromagnetic conductive terminal and the non-magnetic conductive terminal are electrically isolated.

10. (Withdrawn) The in-vivo device according to claim 9, wherein the switch is a MEMS switch.
11. (Withdrawn) The in-vivo device according to claim 9, wherein the sensor is an imager.
12. (Withdrawn) The in-vivo device according to claim 9, wherein the in-vivo device is a swallowable capsule.
13. (Withdrawn) The in-vivo device according to claim 9, wherein the switch is operable to alter the mode of the device in response to a magnetic field.
14. (Currently Amended) A system for in-vivo imaging comprising:
an in-vivo device including at least:
a sensor; and
a normally closed magnetic MEMS switch, wherein said switch is electrically connected to a processing circuit and said switch is configured to change a property of the in-vivo device[[,]]; and
an external control device, the external control device including at least a magnetic field source producing a magnetic field sufficient to ~~operate~~ keep the switch open.
15. (Original) The system of claim 14, wherein the sensor is an imager.
16. (Original) The system of claim 14 comprising:
a controller to:
receive data relating to an in-vivo condition and, in response,
operate the magnetic field source.
17. (Original) The system of claim 16, wherein the controller is to determine the in-vivo condition.
18. (Original) The system of claim 16, wherein the condition is the location of the in-vivo device.
19. (Original) The system of claim 14 wherein the operation of the switch alters the operation of the in-vivo device.

APPLICANT(S): ID DAN, Gavriel J.
SERIAL NO.: 10/811,013
FILED: March 29, 2004
Page 4

20. (Original) The system of claim 19, wherein the altering the operation includes stopping the operation of a component of the in-vivo device.
21. (Original) The system of claim 14, wherein the switch comprises:
 - a first ferromagnetic conductive terminal;
 - a flexible ferromagnetic conductive terminal; and
 - a non-magnetic conductive terminal; wherein the first ferromagnetic conductive terminal and the non-magnetic conductive terminal are electrically isolated.
22. (Original) The system of claim 14, wherein the in-vivo device is a swallowable capsule.
